Education

Boston College Boston, MA

Bachelor of Science in Computer Science, Minor in Finance *Aug. 2025 – May 2029*

- Cumulative GPA: 3.615
- Relevant Coursework: Accelerated Computer Science I; Computer Science II (C++); Web Application Development; Calculus I–II.

Experience

Software Engineering Intern, Leap Program (Incoming) June – Aug. 2027

Fidelity Investments (FMR LLC) *Boston, MA*

- Selected for Fidelity's 10-week Leap software engineering internship following a recruiter screen and technical interview.

Machine Learning Undergraduate Research Fellow June 2026 – Present

PyTorch Connectomics Lab, Boston College (adv. Prof. Donglai Wei) *Boston, MA*

- Annotate mitochondria in large-scale electron-microscopy volumes of mouse cerebellum (16 x 16 x 30 nm voxels) across three postnatal timepoints, producing labeled training data for deep-learning segmentation models.
- Serve as project manager for the H01 dataset collaboration with the UNC School of Medicine: onboard a team of undergraduate proofreaders, run quality control, and track milestones.
- Train segmentation models on Boston College's Andromeda HPC cluster via SLURM using the PyTorch Connectomics and nnUNetv2 frameworks.
- Develop features for the lab's internal annotation web application, including a mitochondria skeleton-length measurement tool.
- Authored the lab's mitochondria annotation documentation and co-presented the team's work to the Boston College Computer Science department (Aug. 2026).

Projects

Quantify – Spotify Listening Analytics Dashboard | *React, Express, Node.js, OAuth 2.0*

- Independently built a full-stack web app that authenticates users through Spotify OAuth 2.0 and displays their top tracks and artists.
- Implemented an Express backend to handle the authorization flow and proxy Spotify API requests to the React front end.

BSA Website | *JavaScript, HTML/CSS · 3-person team*

- Contributed roughly 48% of a 3,400-line codebase for a student organization website, coordinating work across a shared Git repository.

EcoLocate – Recycling Center Finder Web App | *Node.js, Express, JavaScript, HTML/CSS*

- Built a full-stack app allowing users to search for nearby recycling centers, backed by a structured dataset.
- Implemented RESTful routes in Node.js/Express to serve center data and handle query parameters for filtering.

Technical Skills

Languages: Python, Java, JavaScript, C++, HTML/CSS, basic SQL
Frameworks & Libraries: PyTorch, React.js, Node.js, Express
Developer Tools: Git, GitHub, SLURM / HPC clusters, VS Code, Chrome DevTools, Linux command line
Concepts: machine-learning training pipelines, image segmentation, object-oriented programming, RESTful APIs, OAuth 2.0

School Involvement

Boston College Computer Science Society – Member Aug. 2025 – Present

- Attend tech talks and coding events to strengthen programming fundamentals and explore software-development careers.

Boston College Investment Club – General Member Sept. 2026 – Present

- Attend meetings on equity research, market trends, and investment analysis.
